WAXING

Q. How long do I have to wait before waxing?

A. *After shaving, the general rule is 10-14 days. This varies based on speed of your hair growth. If you want to make sure it's long enough, tough it out.*

Q. Is waxing pain free?

A. *Of course not, but there are few things that can affect your tolerance:*

- *Having the hair long enough*
- *The timing of your cycle*
- *The experience & training of your esthetician*
- *Did you show up on time for your appointment 😊*

Q. How often do I have to wax?

A. *Most waxing clients are on a 3-4 week schedule for body waxing. But this can vary client to client.*

SPRING SKIN CARE

Don't you always hear about exfoliation? Well, there is a reason. The skin builds up dead skin cells, and as we age it doesn't shed the way it did when we were younger.

As the seasons change you probably notice the change in your skin. As it's a great time to shed winter clothes, it is also a great time to shed winter skin.

Let us come to the rescue and provide you with a professional skin care treatment that removes the dull and dry skin, and reveal a healthy new glow.

Ready for the right home care regimen? Ask the professional during your appointment.
